

BIOGOLD

NOVITA X HZ 87 P 200

Characteristics

Maturity	8
Foliage development	8
Dormancy	6
Colour of skin	G
Colour of flesh	LG
Yield	7
Shape uniformity	7
Size of tubers	7
Shape of tubers	O
Shallowness of eyes	7
Cooking type	BC
% D.M.	21-22
Harvest damage	6
Black spot	7
Discol. after cooking	8
French fries index	7
Crisps index	5

Resistant to/tolerant

PCN Ro 1	very resistant
PCN Pa 2+3	susceptible
Leaf blight	7
Tuber blight	7,5
Early blight	4
Common scab	5
Wart disease race 1	resistant
PVY (leaf resis.) mod.	susceptible

Crop protection

Metribuzin	less susceptible
CIPC	less susceptible

Comments

BIOGOLD is suitable for all soil types provided the soil does not have an increased susceptibility to common scab. Do not plant too early when the soil is too cold. It requires a high level of fertilisation at the start and develops an open canopy with a moderate number of tubers. It has a quick and firm skin-set which gives a low susceptibility to harvest damage.

BIOGOLD is an early, mealy cooking potato. It was specifically bred as an organic table potato but is also suitable for french fries. It has oval tubers with light yellow flesh and yellow skin.
